CHOOSE MOI

Safety training your crew will actually enjoy

Interactive board-game health & safety training for real workplaces

CHOOSE MOI turns mandatory health & safety training into a board game your team actually finishes. Built from 13 years working in facilities management, it gets every worker playing, learning and remembering — no classrooms, no boring slides, no company email needed.

How it works

- Workers sign in with a simple worker ID and PIN — no email addresses needed.
- They roll the dice, move around the board and answer real safety questions.
- Land on every tile to earn a certificate — proof of training you can keep on file.
- Play on any phone, tablet or computer — or on the break-room TV with live scores.

Speaks your worker's language — automatically

- The game reads each player's phone language and translates itself automatically.
- Questions, answers, subtitles and character voices all switch on their own.
- English, Polish and Romanian are hand-checked; dozens more languages translate on the fly.
- No setup, no language packs to buy — it just works for international crews.

Seven boards, built for real workplaces

- Facilities Management: General, Cleaning crew, Office staff and Security packs.
- Road Safety: General, Professional drivers and Haulage / HGV packs.
- Construction Site HSE and Care & Support boards.
- Adaptable to any industry with health & safety duties — hospitality, warehousing, retail and more — and question packs can be tailored to any country's regulations or replaced with your own content.

Your company cares — arrive home safely.

Every board, every question and every certificate is built around one promise: that everyone who leaves for work in the morning makes it home safely every day. CHOOSE MOI makes that promise something your crew plays, not just reads.

Deadly serious about safety. Seriously fun to play.

For managers and companies

Proof of training, without the paperwork

- A company portal with live reports, certificates and branded exports.
- See who has trained, who passed, and who needs another go.
- Scores, CPD minutes and printable certificates for every worker.
- Printable QR posters get each crew playing in seconds — scan, sign in, play.
- Every company gets its own private, branded link — your data stays separate from everyone else's.

Demo-first, always

- Full client boards use company access; public challenges offer a taster.
- You request a demo, we set up your company, and you control who plays.
- Try the full game on your own phone before you commit to anything.

Why it works

- Short UK safety videos from HSE, THINK! and RoSPA make learning visual and evidence-based.
- Character voices read questions aloud, with an adjustable kid-voice setting.
- Works offline once loaded — perfect for sites with poor signal.
- No app to install: it runs in the browser your workers already have.

Request your demo today

Scan one QR code and walk a full board on your own phone —
in your own language — before you decide anything.

New: your own avatar & offline training

✓ **Personal avatars**

each worker turns their own photo into a CHOOSE MOI cartoon avatar that hops around the board.

✓ **Your avatar speaks**

it announces every tile it lands on, and warns of hazards, in the worker's own language.

✓ **Personal to every employee**

on their own phone, with their name, progress and company toolbox talks.

✓ **Any language**

the phone's language is detected automatically and can be changed at any time.

✓ **Works offline**

talks, sign-offs and scores are saved on the phone and sync when the signal returns.

✓ **Privacy first**

the original photo is never stored; only the chosen avatar stays on the worker's phone.

Personal avatars add-on: Starter £49/year · Team £299/year · Enterprise included

TRAINING THAT FITS YOUR ORGANISATION

Connect your systems. Simplify training records.

Keep frontline training personal — and bring the evidence into the systems your organisation already uses.

Less duplicate admin	Clearer training oversight	Evidence for audits

Choose the right connection

01 **CSV / Excel exports** · Available now
Download training records for reporting or import them into compatible software. A straightforward option without a custom connection.

02 **Direct system connections** · By agreement
Where your HR system, learning management system (LMS) or compliance tool supports an API, an agreed connection could transfer selected training records.

03 **Automatic record updates** · By agreement
Where supported, an agreed connection could update records after completion or on a schedule — reducing repeat data entry and keeping training information current.

What could be shared?

Worker ID • training topic • completion date • assessment results • certificate reference • toolbox-talk acknowledgement. Only required, available data would be transferred.

Designed around your workforce

Workers use their own phones, choose their language and sign in with a worker ID and PIN — no company email required. Your connection is scoped around your employee identifiers and reporting needs.

Direct connections and automatic updates are not active or included by default. Compatibility, permissions, data protection, testing and any setup or ongoing charges are agreed before activation. Records support audit evidence; they do not guarantee compliance or competence.

Let’s discuss your systems

Tell Nikki which software you use and what training records you need.

Every face. Every answer. A moment to shine.

TV multiplayer with player photos and Bev’s winner shoutouts

Bring the team together around a TV or projector. Up to 12 players join from their own phones by scanning the room QR code. No company email or app installation required.

01 Join with a name and optional photo

Players can choose a photo from their phone and consent to sharing it with the TV room. Anyone can play without a photo.

02 Race to the correct safety answer

Live scores show player photos and answer times. The first answer received is identified; points go to the fastest correct answer, not simply the first tap.

03 Celebrate the person, not just the score

The winner appears on the big screen with their photo and name: “Top of the class, [name]!” Bev’s familiar character voice celebrates the winner. The host can mute or replay the shoutout.

04 Keep the useful training evidence

The host can print or save the session summary with participant names and scores. Player photos are excluded from training reports.

Privacy and practical requirements

Photos are compressed on the phone and shared only in the live room; CHOOSE MOI does not save them to a photo library or audit record. Close the room when finished. Live multiplayer needs internet. Bev’s voice plays through the host’s speakers using the existing character read-aloud service; voice generation uses owner AI credits.
