

TRAINING THAT FITS YOUR ORGANISATION

Connect your systems. Simplify training records.

Keep frontline training personal — and bring the evidence into the systems your organisation already uses.

Less duplicate admin

Clearer training oversight

Evidence for audits

Choose the right connection

- 01 CSV / Excel exports** · Available now
Download training records for reporting or import them into compatible software. A straightforward option without a custom connection.
- 02 Direct system connections** · By agreement
Where your HR system, learning management system (LMS) or compliance tool supports an API, an agreed connection could transfer selected training records.
- 03 Automatic record updates** · By agreement
Where supported, an agreed connection could update records after completion or on a schedule — reducing repeat data entry and keeping training information current.

What could be shared?

Worker ID • training topic • completion date • assessment results • certificate reference • toolbox-talk acknowledgement. Only required, available data would be transferred.

Designed around your workforce

Workers use their own phones, choose their language and sign in with a worker ID and PIN — no company email required. Your connection is scoped around your employee identifiers and reporting needs.

Direct connections and automatic updates are not active or included by default. Compatibility, permissions, data protection, testing and any setup or ongoing charges are agreed before activation. Records support audit evidence; they do not guarantee compliance or competence.

Let's discuss your systems

Tell Nikki which software you use and what training records you need.
